removing offensive material is, de facto, an alteration of the
archival record and constitutes willfully destroying records
to conceal facts or distort evidence.*

As such, the material in the archive remains as a historical record.

Salt Lake City

7-12-1918.

Mr. Johnson,

Dear Sir:-

One thing after another has delayed my sending the names till ~~now~~. My sister whom I have hardly seen for forty years came unexpectedly and I felt that I must devote all my time to her. Then other things piling up have kept me from going through the plants as I would for I ^{was} wated to sit down and go over them thoroughly.

No. 1063	is <i>Astragalus coccineus</i> (Parry) Brandegee.	Palm Canon
1065	<i>lentiginosus</i> var. <i>Coulteri</i> (Gr.) Jones.	Whitewater
1319	<i>leucopsis</i> gray T. & G.	Playa del Rey
965	<i>leucophyllus</i> T. & G.	Nigger Slough
1845, 1846, 1852, 1854	<i>Pomonensis</i> Jones. (Nutt.)	
2095, 1964	<i>trichopodus</i> Gray.	S. of Pomona.

Glad to get the fresh material of *A. bicristatus*. Will figure it in my monograph.

No. 1885 *Allium serratum* Watson.

Temescal Canon

1207, 2049, 1884, *Allium haemitechiton* Watson.

2031 *Allium Douglasii*. This is nearly typical except for the stamens being little over half the segments and leaves narrower. It has no crests. It is another evidence of the variability of the species.

A. Pomonensis is a very variable species, am glad to get the forms.

A. leucopsis and *leucophyllus* differ only in the woolly hairs in the one case and silky ones in the other, which I do not think amount to much unless you can find other characters in the field.

Very truly yours,

Marion E. Jones
